Business Development at PM Group

NYU B.S. in Communications,
Double Minor in Adolescent Psychology
& Business in Tech

ABOUT ME

Experienced in a mix of industries from manufacturing, tech, art, and banking. I've worked at TikTok on growth strategy and influencer management, alongside marketing and business development roles at PPE manufacturer, an auctioneer, M&A startup, and a major Taiwanese bank.

This range has given me exposure to both consumer tech platforms and more traditional sectors like manufacturing, finance, and luxury goods, across markets in the US and Taiwan.

SKILLS & INTERESTS

- Language: English, Chinese, Korean
- Volunteer work for animal shelters & orphanages
- Hobbies include photography, Pilates, Formula 1, Food, Travel

intertwin

ABOUT INTERTWIN.AI

Imagine every customer had a **living digital twin that evolved every day**. A continuously evolving behavioral model that learns from purchases, conversations, reviews, videos, voice, and real-world interactions. Just as ChatGPT became the reasoning engine for language, we're building the reasoning engine for consumer behavior—helping companies understand, predict, and simulate customer decisions before they happen.

VISION & FUTURE

The problem

The Intelligence Gap in Consumer Data

Companies possess unprecedented volumes of multimodal customer data (Shopify, CRMs, web analytics, social media), yet existing analytical tools only explain what happened, completely missing the underlying psychological drivers of why decisions are made.

- The Cost of Friction: Approximately 70% of online shopping carts are abandoned before purchase.
- The Inefficiency: Brands spend over \$140 Billion annually on market research that remains fragmented, slow, expensive, and limited to static, point-in-time studies.
- The Vision: Every single consumer possesses a living, continuously evolving digital twin that models their preference engine in real time.

The product

Continuously Evolving Multimodal AI Consumer Twins

InterTwin.AI transforms fragmented, passive corporate datasets into dynamic behavioral models.

- **Multimodal Engine:** Connects natively to enterprise CRM systems, transaction pipelines, and customer touchpoints. It leverages LLMs to ingest and process text, video, voice, and macro contextual shifts (cultural trends, seasonal events).
- **Synthetic Focus Groups:** Brands simulate campaigns, dynamic pricing models, complex packaging changes, and product launches through AI consumer twins—predicting human responses before allocating physical capital.
- **Privacy-First Architecture:** Consumers strictly maintain ownership and granular control of their data. Brands access aggregate actionable insights and behavioral predictions rather than raw personally identifiable information (PII).

The plan

The Universal Intelligence Layer & Go-to-Market

- **Phase 1** (B2B SaaS Focus): Immediate deployment empowering brands across high-velocity consumer sectors: Beauty, Fashion, Wellness, Food, and Consumer Tech.
- **Phase 2** (The Consumer Flywheel): Introduction of an AI-powered consumer diary and social shopping platform (inspired by Beli). Users naturally curate their product experiences through text, photo, and voice, creating a high-moat data network. Acceleration can be fast-tracked by acquiring existing consumer review data networks (e.g., Flip).

SILICON VALLEY OBJECTIVES

1. CAREER ARCHITECTURE & NAVIGATION

- Designing a high-growth career roadmap to grow from marketing roles
- Tactical guidance for the Silicon Valley startup job search

2. CORE COMPANY BUILDING & GO-TO-MARKET

- Structuring early-stage operations, financial modeling, & evaluation
- Sourcing technical co-founders aligned with the product vision

3. TECHNICAL & REGULATORY FEASIBILITY

- Navigating data privacy compliance for multimodal consumer tracking
- Best practices for training proprietary LLM consumer behavior engines

UniKudo.

The Taiwanese Admissions Navigator

Platform unikudo.vercel.app

Program 2026 NTU AI Builders

We turn **70+ scattered, often confusing** university portals into **one guided path** to a Taiwanese degree.

2,000+

PROGRAMS INDEXED

70+

UNIVERSITIES

70+

PEOPLE SURVEYED

Live

PUBLIC PROTOTYPE

PROBLEM Applying is a maze

- Admissions rules are buried across **70+ portals** — each one laid out differently and often confusing to navigate.
- One missed form, notarization, or deadline means an **instant rejection** — and a lost year.
- There's no single place to compare programs, eligibility, or requirements.

SOLUTION One guided dashboard

- **Search & compare** 2,000+ programs by region, track, and language, in one place.
- **Instant checklist:** enter your profile, get a personalized document timeline.
- **AI Q&A** that answers only from official university sources — no guessing.

MARKET

An estimated 40,000 international & overseas Chinese students apply to Taiwanese schools yearly — starting with English-proficient applicants navigating confusing, hard-to-parse portals.

BUSINESS MODEL

Free directory & checklist drive users in; a premium document assistant monetizes them; universities pay to reach our pipeline as demand shifts regionally.

THE ASK

Mentorship from EdTech & admissions advisors, plus intros to Taiwan's international high school and language-center networks.

Mirror

The AI speech coach that lets you hear *the better version of yourself*.

718 users in 8 weeks • Solo • agentic build • Trilingual ZH / EN / JP

蔡秉叡 Ray Tsai · NTU Computer Science · Prof. Mike Chen's HCI Lab · Solo Founder

The Problem *the structural gap in interview & speaking prep*

- Human coaches — effective, but expensive and only available now and then.
- ChatGPT's voice — helpful, but it isn't yours.
- Western voice AI — polishes you into someone else, erasing your accent.

Every tool clones a creator so fans can talk to them. **Nobody clones you, for you** — to hear yourself the way everyone else does.

What Mirror Does *one engine · four scenarios*

You speak → AI rewrites → You hear it back in your own cloned voice — accent kept, not erased.

01
Interview Sim
4 answer frameworks · 55% of all usage

02
Presentation

Building AI-First Enterprise Workflows

Moving beyond chatbots to secure, highly integrated workflows and productivity systems

Yu-Chian (Kayne) Duan

✉ duankayne@gmail.com

🌐 [linkedin.com/in/kayne-duan-23895633a/](https://www.linkedin.com/in/kayne-duan-23895633a/)

🐙 [github/CoKayne](https://github.com/CoKayne)

🎓 Academic & NLP Foundation

National Taiwan University (NTU): Computer Science and Information Engineering BS Candidate (Expected June 2027).

MiuLab AI Security Researcher: Researched LLM agent security using RedCode-Gen benchmarks.

Designed a vector database-driven Retrieval-Augmented Defense mechanism against prompt injection, boosting refusal rates by **36.2%**.

Core Focus: Clean, secure enterprise code pipelines

🔄 Internal Software Workflows

Head of IT at NTU Student Association: Leading a team of 14 system developers building campus Wi-Fi tracking and election architectures.

Workflow & Integration Insight: Experienced first-hand the technical friction and adoption bottlenecks when integrating modern tools into large-scale environments.

Full-Stack Focus: Developed robust React/Django tools optimizing JWT security & local database structures. Built the website for Innovation North lab, and worked at the startup Adventure Cube on LLM story generation and in-context tuning.

🎯 The CouPro Scaling Lesson

CouPro

Traction: Deployed a local coupon network driving 500+ users and achieving 10% merchant revenue gains.

The Operational Bottleneck: Temporarily halted operations. Recognized that scaling campus-centric merchant BD and sales was highly inefficient for 3 part-time students.

🔗 The SV Pivot: Moving past physical sales towards purely digital, highly scalable B2B workspace architectures.

FUN FACT

My name is **Kayne**, but many people gave me the honor to be Kanye from Kanye West, or Kayne from the handsome guy in Barbie. So to avoid confusion, I named myself **CoKayne** online — nobody confuses anymore, but I'm afraid one day I might get in trouble for this name.

Hello, I'm JJ.

Drama student at National Taiwan University, building technology that solves the operational challenges of small theatre companies and independent performing arts teams.

ONE VISION

A complete digital infrastructure for the performing arts

1

IndieShow

AI TICKETING & PROMOTION

Born from producing an NTU Drama run — 2,000+ visits, 225 orders, 90%+ attendance across 4 shows. Now a platform to generate promo content with AI, build event pages, and manage tickets, waitlists & on-site check-in.

2

CoTheatre

ADMIN & PERSONNEL SYSTEM

Professionals keep one profile and share résumés, contacts & bank details securely via permission controls. Teams manage membership, roles, documents, payments, announcements & exports — no more scattered spreadsheets.

3

CloudJoi

IMMERSIVE ONLINE THEATRE

Bringing stage productions online through high-resolution video and an immersive theatre experience — helping theatre companies reach wider audiences, promote their work, and generate additional revenue.

2,000+ site visits

225 orders processed

90%+ attendance rate

9 organizers user-tested

SEEKING IN SILICON VALLEY

Partners in AI, SaaS, ticketing, payments & cultural tech for international expansion

Investors who see the long-term potential of vertical SaaS in the performing arts

The human data layer for AI agents — open-source “LinkedIn for AI agents”

AI agents need verified, consent-based people data.
Today it's **fragmented, unverifiable, and locked** inside closed platforms.

- ✓ **Verified, authorized profiles** — not scraped data
- ✓ **AI match-scoring** on structured attributes
- ✓ **Traceable consent** on every record
- ✓ **Agent-queryable** via open API / MCP schema

HuMetric is the **open, authorized infrastructure layer** for people data — like GitHub or Google Maps, but for humans.

Boutique headhunters & startups
pay for search

Candidates verify & upload profiles for visibility

Open API for AI agents to query verified people data

- NTU Garage AI cohort
- NTU Silicon Valley Exploration Program (US\$5,000)

- **5,000+** verified talent profiles by Aug 7
- **First paying customer** by mid-August

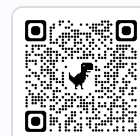

Juicebox, GitRoll, SeekOut are closed, single-platform search tools. HuMetric is the **only open, agent-facing infrastructure layer**.

Paul Yao — Founder/CEO · **Archi** — CTO · **Bowen** — BD & Algorithms · **Lin** — UI/UX. Founder shipped **3 products 0→1** in the last 18 months.

AI agents are exploding, but every agent starts from zero on “who is this person.” Recruiters fund the data today; agents monetize it tomorrow.

Raising a **pre-seed round** for engineering, GTM execution, and the agent API launch. Seeking investors and design partners in recruiting, HR tech, and AI agent builders.

Alpha Builders

lets anyone do professional-grade stock research — in plain English.

HOW IT WORKS

1 Describe

You describe what you're looking for in plain English.

2 Build

Alpha Builders builds a strategy using research-backed signals.

• ~75 signals · validated in academia & industry

3 Test

Then it tests that idea across more than a decade of market data, while accounting for common backtesting problems like survivorship bias and transaction costs.

• S&P 500 + Russell 2000 · 2013–present · delisted stocks included

■ THE MARKET WIRE · 2H AGO

They're all wrong. *Do the exact opposite.*

That's investing for most people today — **a lot of noise, but very little clarity.**

WHY NOW

SoFi acquired category leader Composer in June 2026. The category is validated — and the independent, research-only position is open. **We're taking it.**

OUR EDGE

We read our four closest competitors down to their source code: frozen stock pools, undisclosed backtest methodology. **We built what none of them offers today** — live stock selection, with the failed companies still in the data.

FOUNDER

Ryan Wu. Interned nine months at a quantitative trading firm and kept seeing the same gap: professional research workflows on one side, ordinary investors guessing on the other. Studied economics at National Taiwan University; designed, built, and shipped Alpha Builders solo.

Your criteria, your decision — you get a result you can trust, instead of a thousand opinions.

It's live today — see it run at alphabuildersus.com

Leverage Ecosystem

Exchange with academic/research experts and the ecosystem:

Hypothesis Testing & Learning

Continuously test commercial hypotheses and learn from this experience.

THE PROBLEM

No Digital Passport, No EU Market.

Under the EU's ESPR, products sold into Europe need a verifiable Digital Product Passport — materials, origin and footprint, stitched across dozens of suppliers.

Don't share

No passport, no EU market access. The product can't be sold.

Do share

Suppliers, costs and processes — trade secrets — exposed to the chain.

You can't comply without leaking, and you can't leak.
Today nobody can do both.

THE SOLUTION

Three properties, two proven primitives.

Immutability

BLOCKCHAIN

Anchored on-chain — records can't be altered or backdated.

Privacy-preserving

ZK PROOF

The proof travels; the factory data never leaves.

Verifiability

ZK PROOF

Anyone can check a passport is genuine, seeing nothing behind it.

Not a trust assumption — both primitives rest on established academic results.

THE REGULATORY WAVE

DPP timeline

2027	Batteries
2028–29	Iron & Steel · ★ Textiles (our entry point) · Tyres · Aluminium
2029	Detergents · Packaging (PPWR)
2029–30	Furniture · Construction products incl. cement (CPR)
2030	Toys · Mattresses

Indicative timeline. Battery passport (Feb 2027) confirmed; ESPR delegated acts subject to adoption. Sources: Circularise; ESPR Working Plan COM(2025) 187; EU Battery Regulation 2023/1542.

\$0.08 PER PASSPORT

Plus a platform subscription per manufacturer

\$10B TAM

All EU products requiring a DPP

\$1.2B SAM

Asia-made textiles sold into the EU

\$6M SOM

Taiwanese-capital textiles into the EU

WHY US — CRYPTOGRAPHY MEETS THE FACTORY FLOOR

Spun out of Prof. Shih-Wei Liao's lab (NTU CSIE), Taiwan's blockchain pioneer. Practising security engineers, an ETHGlobal Taipei UHI global runner-up, and direct ties into the market where >70% of the world's functional fabric is made.

TRACTION

Long Advance International — Taiwan functional-fabric leader supplying MAMMUT, Jack Wolfskin and Mountain Equipment. Chairman championing EU DPP internally; POC in progress.

Fellowtrip
